Problem / Question

BYOx - Microsoft Family Features of Content Restriction (stopping access to inappropriate sites) conflicts with Onboarding a device

Solution

1. The parent must log into their Microsoft account first, add the white listings under the Content Restrictions section:

U) 📫 https://accou	nt.microsoft.con	n/tamily/settings/	content-restrict	ions/193521/319382644	283#cr-appsga	ames-header			
Microsoft	Store 🛩	Products ~	Support							Search Microsoft.com
Account	Your info	Privacy	Security	Rewards	Payment & billing	~ Serv	ices & subscriptions	Devices	Family	1
Activity	a parent	ontent restricti	Spending		in the Minute Gran					
	n to require aduit get with gift card				uy in the Microsoft Store	except for	Needs adult appro Off Email me when my			

- 2. The parent Microsoft account needs to add following three sites into children account's white list:
 - The homepage(s) of the default browser (Microsoft Edge or Internet Explorer)
 - msftconnecttest.com/redirect
 - guestportal.byo.eq.edu.au

Dev Web browsing				
Turn this on to block inappropriate websites and help protect your child from sites and search results that are too mature.	Block inappropriate websites			
This setting only works with Microsoft Edge and Internet Explorer on Windows 10 and Xbox One devices and blocks commonly used browsers to help keep your child safer. To unblock them, go to Always blocked in the Apps, games & media section above.	Adult content is blocked and SafeSearch is on			
Always allowed (3)				
Add a website you want to allow +	✓ Only allow these websites ⑦			
m ^e msftconnecttest.com/redirect	× Remove			
msn.cn/spartan/dhp?locale=en-US&market=AU&enableregulatorypsm=0&enablecpsm=0&ishostisolation	\times Remove			
guestportal.byo.eq.edu.au/	× Remove			

Issues:

• The URL must be put in exactly as above, we attempted to add the guestportal with an additonal / at the end of the URL and this caused it to fail. You may be able to add the http/https at the beginning but this is not needed.

3. Once added, the student/child microsoft account must be logged into the device and the Internet accessed in order to sync the settings to the machine.

4. Once the child account is synced the onboarding process can continue.
